TISAX stands for "Trusted Information Security Assessment Exchange" and is an information security standard developed by the automotive industry.

The ENX Association supports with TISAX on behalf of VDA the common acceptance of Information Security Assessments in the automotive industry.

The VDA Information Security Assessment (VDA ISA) is a catalog of requirements for information security that is based on essential aspects of the international standard ISO/IEC 27001. The TISAX audits are carried out by accredited audit service providers who have to prove their qualifications at regular intervals. TISAX and TISAX results are not intended for the public.

The confidentiality, availability and integrity of information are very important to helag-electronic gmbh. We have taken extensive measures to protect sensitive and confidential data and follow the catalog of requirements for information security of the German Association of the Automotive Industry (VDA ISA) as part of our information security management system (ISMS).

The Assessment was conducted by an audit provider, in this case the TISAX audit provider DQS BIT GmbH. The result is exclusively retrievable over the ENX Portal:
